MASTER PLAN OF OLYMPIC ATHLETIC CENTER OF ATHENS (O.A.K.A.)- GREECE

Doxiadis Associates was involved in the organizational aspects of the Olympic projects implementation for the year 2004 Games in Athens. One of the major tasks was the master plan design of O.A.K.A as the main Olympic arena of the city of Athens, programmed to host the major events of the Games.

The aim of the project was the elaboration of an overall organizational framework of the Center's functions covering its demands and Olympic standards through strategic design. The study proceeded with an inventory of areas adjacent to the arena that can be used for the needs of major events of the Games.

The areas covered by this main stadium comprise a variety of functions, centered on O.A.K.A. Other than the Olympic Stadium, additional zones include the Covered Gymnastics Arena, the Olympic Swimming Competition Pools, the Cyclodrome and Volleyball terrains and a multitude of service facilities. Special zones are designed to accommodate restaurants, communications broadcasting center, commercial sections, health center, as well as training fields, administrative quarters and security installations.

O.A.K.A. General Master Plan

Great emphasis was put on the investigation of aspects of appearance of the areas surrounding the athletic installations, especially regarding the construction of overlays (various temporary structures) for Olympic use. Moreover, the study covered traffic management, access and parking areas, controlled internal circulation organization and design for both vehicles and pedestrians, as well as environmental considerations and corresponding appropriate measures for the various functions of the complex.

External view of the Arena

Aerial view, Access and Entrances

The project was elaborated in three stages; it started on February 2001 and was completed on December 2001. The study cost was 500.000 US\$.

Stage one dealt with the designation of Overlays optimum location, stage two with the design of networks distinguishing specific movement of athletes, spectators, team /

missions members, VIP, sponsors and media representatives, administration and security personnel. Definition of zones for servicing all venues including restoration, retail, communication and health was elaborated during the second phase. Stage three was concerned with final adaptations to the overall design before implementation.
